

AI-POWERED DEVELOPMENT PIPELINE

From Requirement → Pull Request in Minutes

Automate planning, coding, and testing with AI.
Human review stays in control.

● No extra infrastructure

● ~3 min end-to-end

● Human approval required

Step 1-2: Trigger the Pipeline

Go from structured issue to running automation in seconds

 Zero ticket system needed

STEP 01

Write Structured GitHub Issue

Include:

- Problem
- Acceptance criteria
- Scope

GitHub Issues

Issue Form

STEP 02

Add Label to Start Automation

Apply `ai-implement`.

GitHub Actions starts automatically.

No custom webhook setup.

GitHub Actions

Auto-trigger

Step 3-4: Build + Validate

AI implements the feature, then automated tests verify quality

Tests must pass before commit

STEP 03

AI Agent Implements Feature

Uses repo standards and project context.
Writes production code + tests.

AI Engineering

Code + Tests

STEP 04

Automated Test Gate

Backend tests + Playwright E2E must pass.
If tests fail: report + artifacts are posted.

Backend tests

Playwright E2E

Step 5-6: Review + Merge

Automation opens the PR, human reviewers make the final decision

✓ AI never auto-merges

STEP 05

PR Is Auto-Created

Branch pushed, PR opened, reviewer assigned.
Issue is linked for traceability.

AI-generated

CODEOWNERS

STEP 06

Human Reviews & Merges

Review diff, checklist, and tests before merge.
AI implements. Humans decide.

Code Review

Safe by design

Why This **Works** — Real Results

Zero Extra Infrastructure

Runs on GitHub Actions.
No servers to manage.

~3 min end-to-end

From label click to open PR.
~\$0.33 per feature in AI cost.

Always Human-Verified

Prompt-injection hardened.
Human approval on every merge.

"What would your team ship if small features took minutes, not days?"
